1 Project Synopsis

The Tracetea System Enhancement Project aims to redesign and optimize the existing Tracetea platform based on the revised functional flow to create a unified, role-based digital ecosystem for all stakeholders — Small Tea Growers (STGs), Aggregators/Lead Farmers, and Bought Leaf Factories (BLFs).

The scope of work involves developing a single mobile application that consolidates all user functions, replacing the earlier multiple apps, and introducing new features such as unified login with OTP for BLFs, enhanced farm diary with digital map uploads, multi-grower supply management for Aggregators, and integrated challan processing for BLFs.

Additionally, the web application will be upgraded to allow BLF users to add and manage farm-level data on behalf of STGs and Aggregators while retaining all existing supply processing and reporting functionalities. Through these enhancements, the project will streamline workflows, ensure seamless data flow across all user roles, and strengthen the traceability and transparency of the tea supply chain from farm to factory.

2 Functional Requirement

2.1 Mobile Application

The unified mobile application supports the following user types:

- Small Tea Grower (STG)
- Aggregator / Lead Farmer
- Factory User (BLF)

Each role has a separate dashboard, feature access, and functional flow.

2.1.1 Small Tea Grower (STG)

1. Login

- a. Description:
 - i. All users access a single login page. STGs log in using Username and Password.
- b. Flow:
 - i. Open app → Unified login page.
 - ii. Enter Username and Password.
 - iii. Click Login.
 - iv. System validates credentials → redirects to Grower Dashboard.
 - v. “Forgot Password” option reset password.

SHYAM

FUTURE TECH PVT. LTD.
ISO 9001:2015 | ISO 27001:2013

1. If user enters User ID and mobile number exists → OTP sent → After correct OTP, new password can be set.
2. If no mobile exists → User must contact Trustea Admin to reset password.

c. Conditions:

- i. Only registered users can log in.
- ii. OTP login is not applicable for STG.
- iii. User without mobile cannot reset password themselves.
- iv. Grower Identification Validation: Each Grower must have at least one of the following identification fields:

- a) **TBR (Tea Board Registration) No.**
- b) **Land Document (Registration) No.**
- c) **Lease Agreement No.**
- d) **Gaon Bura/Gram Panchayet Pradhan Certificate (Memo) No.**
- e) **Enjoyment Certificate No. (issued by VLAO)**

These five fields are essential for identifying Small Tea Growers.

Additionally, please include another category for individual identification with the following fields:

- a) **Voter ID Card No.**
- b) **PAN No.**
- c) **Driving License No.**
- d) **Ration Card No.**

Mandatory Rule: At least one field must be provided from each of the two identification categories.

d. Validations:

- i. Username and Password fields must not be empty.
- ii. Credentials must match the records in the database.
- iii. OTP validation for eligible accounts.
- iv. If an existing Grower has all four Grower Identification empty
 1. System forces update at next login
 2. Login blocked until at least one ID is updated.

2. Dashboard

a. Description:

SHYAM

FUTURE TECH PVT. LTD.
ISO 9001:2015 | ISO 27001:2013

- i. A personalized dashboard summarizing the grower's supply history and access to major modules.
- b. Flow:
 - i. Displays Supply Data Summary – total quantity supplied within a specific period.
 - ii. Start and End Date can be selected from a calendar; default view shows last 30 days.
 - iii. Modules available as buttons:
 - 1. Farm Diary
 - 2. Supply Management
 - 3. Supply Report
 - 4. Vehicle Management
 - f) User Profile with Name, User Type, QR Code, Contact No.,
 - g) **TBR (Tea Board Registration) No.**
 - h) **Land Document (Registration) No.**
 - i) **Lease Agreement No.**
 - j) **Gaon Bura/Gram Panchayet Pradhan Certificate (Memo) No.**
 - k) **Enjoyment Certificate No. (issued by VLAO)**
 - l) **Voter ID Card No.**
 - m) **PAN No.**
 - n) **Driving License No.**
 - o) **Ration Card No.**
- appears at top.
- 5. Display all available identification numbers
(Tea Board Registration No., Land Document No., Lease Agreement No., Gaon Bura Certificate No. based on the data entered.
- iv. Bottom navigation: Home | Profile | Logout.
- c. Conditions:
 - i. Supply summary updates automatically after date range selection.
- d. Validations:
 - i. Date range must be valid and not future-dated.
 - ii. Grower Identification Validation: Each Grower must have at least one of the following identification fields: TBR No., Land Document No., Lease Agreement No., Gaon Bura Certificate No.

3. Farm Diary with Digital Map Upload

- a. Description:
 - i. The Farm Diary records daily agricultural activities, mapping, and agreements for the grower's land.
- b. Flow:

SHYAM

FUTURE TECH PVT. LTD.

ISO 9001:2015 | ISO 27001:2013

- i. Tap Farm Diary from the dashboard.
- ii. Top section – Select Start Date and End Date, then tap Download to export report in PDF & Excel. (If any filter is applied, entire filtered data set is exported into PDF/Excel, not only first page records.)
- iii. Sections represented by buttons:
 1. Map of Land
 2. Fertilizer Application
 3. Chemical Application
 4. Plucking Data
 5. Labour Management (While adding labour , multiple labour names can be selected simultaneously instead of a single entry.)
 6. Monthly Schedule of Work (Displays recent 12 months by default.)
 7. Agreement & Registration (Digitally signed or upload signed copy)
- iv. Map of Land provides two options:
 1. Manual Map Image Upload – Upload from Camera or Gallery, then Save.
 2. Digital Map Upload – Search location or manually mark polygon points
→ Save Map or Download Map.
 - a. For digital mapping after completing the marking the marked area will show and it will show the total area marked. and it should match with the area of the particular user, Margin of error: = $\pm 5\%$
 3. Manual Area Entry Option Added
 - a. The user can also manually enter the land area/coordinates if map tapping is not possible.
- v. Each data entry form (auto-populates the current date in the date field by default) while allowing edits for past entries.
- vi. Use Back Arrow or Bottom Navigation for exit.
- c. Conditions:
 - i. Internet is required for digital mapping.
 - ii. Manual upload allows image files only.
- d. Validations:
 - i. Start/End Date valid.
 - ii. Polygon shape must be closed before saving.
 - iii. Uploaded image formats accepted: JPEG/PNG.

4. Supply Management

- a. Description:
 - i. Used by STG to record supplies sent to a BLF.
- b. Flow:

SHYAM

FUTURE TECH PVT. LTD.

ISO 9001:2015 | ISO 27001:2013

- i. Tap Supply Management.
- ii. Enter:
 - 1. Date of Supply (Defaults to the current date, editable if needed.)
 - 2. BLF Name
 - 3. Quantity (in kg)-
Auto-populated from the latest Plucking Data record in the Farm Diary;
user can modify if required.
 - 4. Vehicle Details (optional Bag ID, Driver Name, Mobile auto-fetched).
- iii. Tap Go/Submit.
- iv. A Challan View is generated showing:
 - 1. Challan ID
 - 2. Summary of supply details
 - 3. Edit, Download, and Back buttons.
- c. Conditions:
 - i. Each entry saved as a “Pending Challan” until processed by BLF.
 - ii. Once processed by the BLF, the Grower cannot edit or delete the challan record; only view and download options remain available.
- d. Validations:
 - i. All mandatory fields (Date, BLF, Quantity) must be filled.
 - ii. Quantity must be greater than zero.

5. Supply Report

- a. Description:
 - i. Displays list of all supplies with status indicators and export options.
- b. Flow:
 - i. Tap Supply Report.
 - ii. Apply Date Filter (optional).
 - iii. View list with columns: Challan ID, Date, Vehicle, Status.
 - 1. Pending – Yellow
 - 2. Processed – Green
 - iv. “Download PDF or Excel” generates summary report(Exports the entire filtered data set, not just the first page records).
 - v. Edit option available for Pending challans only.
 - vi. Listing page will show 10 records at a time/page.
- c. Validations:
 - i. Valid date filter required.

6. Vehicle Management

- a. Description:
 - i. Stores details of owned and hired vehicles used for transport.
- b. Flow:

SHYAM

FUTURE TECH PVT. LTD.

ISO 9001:2015 | ISO 27001:2013

- i. Tap Vehicle Management.
 - ii. View list of vehicles (Type, Number, Date).
 - iii. Tap “Add +” to register a new vehicle.
 - iv. Use Edit or Delete (with confirmation) to modify or remove entries.
- c. Validations:
 - i. Vehicle Type and Number fields cannot be empty.
 - ii. All edit or delete functions will occur till the challan processing from factory end. IF processed, there will be no such modification.

2.1.2 Aggregator

1. Login

- a. Same unified login process as STG.
- b. Username/Password-based authentication.
- c. “Forgot Password” option reset password.
 - i. If user enters User ID and mobile number exists → OTP sent → After correct OTP, new password can be set.
 - ii. If no mobile exists → User must contact Trustea Admin to reset password.

2. Dashboard

- a. Description:
 - i. The Aggregator can record and maintain farm activities for the Growers who are mapped under them, covering land details, farming inputs, and field operation.
- b. Flow:
 - i. Tap Farm Diary from the dashboard
 - ii. Search and select a Grower from the mapped list.
 - iii. The Farm Diary screen opens for the selected Grower and displays sections through buttons:
 - 1. Map of Land
 - 2. Fertilizer Application
 - 3. Chemical Application
 - 4. Supply Report
 - 5. Plucking Data
 - 6. Labour List
 - 7. Monthly Schedule of Work
 - 8. Agreement & Registration
 - iii. Map of Land
 - 1. Manual Map Image Upload – Upload an image from Camera or Gallery and Save.

SHYAM

FUTURE TECH PVT. LTD.

ISO 9001:2015 | ISO 27001:2013

2. Digital Map Upload –

Search location or draw polygon points on map → Save Map or Download Map.

- a. For digital mapping after completing the marking the marked area will show and it will show the total area marked. and it should match with the area of the particular user, Margin of error: = $\pm 5\%$

3. Additionally, the Aggregator can enter the land area or coordinates manually in cases where map tapping is not feasible.

iv. Fertilizer / Chemical Application, Plucking Data, and Labour List:

1. Each data entry form shows a Date of Usage auto-filled with the current date (editable for past entries)
2. In Labour List, multiple labour names can be selected in the same record instead of adding them one by one.

v. Monthly Schedule of Work:

1. Displays planned activities for the most recent 12 months by default.

vi. Download PDF or Excel:

1. Download PDF or Excel button exports the entire filtered data set covering all entries within the selected date range (if no filter applied, export all data)

vii. QR Code and Profile (Name, User Type, QR Code, Contact No.)

iv. Bottom navigation: Home | Profile | Logout.

c. Conditions:

- i. The Aggregator can view and edit records only for the Growers mapped to their profile.
- ii. Internet connectivity is required for digital map operations.

d. Validations:

- i. A valid Grower ID must be selected before data entry.
- ii. For mapping, either a polygon must be closed properly or a map image must be uploaded.
- iii. Accepted image formats for manual uploads: JPEG / PNG.

3. Farm Diary

a. Description:

- i. Aggregators can record farm activities for Growers under their supervision.

b. Flow:

- i. Tap Farm Diary.
- ii. Search and select a Grower.
- iii. Access sections (same as Grower): Map, Fertilizer, Chemical, etc.

- iv. Perform Add/Edit operations.
- v. Export PDF or Excel using Start/End Date filters.
- c. Conditions:
 - i. Aggregator can edit only for mapped growers.
- d. Validations:
 - i. Valid Grower ID required.
 - ii. Polygon or map image mandatory for land mapping.

4. Supply Management

- a. Description:
 - i. Used to record bulk supplies from Aggregator to BLF.
- b. Flow:
 - i. Tap Supply Management.
 - ii. Enter: Date, BLF, Vehicle No.
 - iii. Add multiple Growers and respective quantities.
 - iv. System auto-calculates Total Quantity.
 - v. Submit → Challan generated.
 - vi. View/Edit Challan from list.
- c. Conditions:
 - i. Total supply = sum of individual grower quantities.
 - ii. Once a Challan is processed by BLF, the Aggregator cannot edit or delete it; record becomes view-only.
- d. Validations:
 - i. All mandatory fields required.
 - ii. Total cannot exceed defined limits (if any).

5. Supply Report

- a. Same as STG, with Aggregated totals.
- b. Colour-coded status (Pending/Processed).
- c. PDF or Excel download enabled. (If a filter is applied, PDF or Excel download exports the entire filtered data set, or else it exports all data in a list)
- d. Listing page shows 10 records by default.

6. Vehicle Management

- a. Same functionality as STG.
- b. Add/Edit/Delete with confirmation.
 - i. All edit or delete functions will occur till the challan processing from factory end. IF processed, there will be no such modification.

2.1.3 Factory User (BLF)

1. Login

- a. Description:
 - i. Unified login with additional OTP option for BLF users.

SHYAM

FUTURE TECH PVT. LTD.
ISO 9001:2015 | ISO 27001:2013

b. Flow:

- i. Open app → Unified login page.
- ii. Enter Username & Password OR
 1. Mobile Number → Tap “Get OTP.”
 2. Enter received OTP → Login.
- iii. Redirected to Factory Dashboard.
- iv. “Forgot Password” option reset password.
 1. If user enters User ID and mobile number exists → OTP sent → After correct OTP, new password can be set.
 2. If no mobile exists → User must contact Trustea Admin to reset password.

c. Validations:

- i. Mobile Number must be registered.
- ii. OTP must match system record.

2. Dashboard

a. Description:

- i. Displays operational overview for BLF users.

b. Flow:

- i. Shows:
 1. Total Pending Challans
 2. Processed Challans
 3. Create New Challan
- ii. Each button opens the respective module.
- iii. QR Code and Profile(Name, User Type, QR Code, Contact No., TMCO No.) on top.

3. Supply Processing

a. Description:

- i. BLF verifies and processes challans submitted by STG or Aggregator.

b. Flow:

- i. Tap Pending Challans.
- ii. View list: Challan ID, Supplier, Date, Vehicle, Total Qty.
- iii. Select a challan → Process Challan.

c. If Supplier is STG:

- i. Weighment Section: Enter Gross, Tare → Nett auto-calculated.
- ii. Leaf Receipt Section: Deduction %, Fine Leaf %, Quality, Payment, Acknowledgement.
- iii. Finalize → moves to Processed list.

d. If Supplier is Aggregator:

- i. Same as above, plus:

1. Grower Breakup Section: distribute final weight among individual growers.
2. Vehicle Release Confirmation.
 - ii. Finalize → Processed Challans list.
 - iii. Supplier Exit: At the time of final submission or exit, the BLF user must select an acknowledgment status of either Received or Rejected to complete the processing flow.
 - iv. Leaf Deduction: If the supplied quantity from an Aggregator is found to be less than the recorded quantity, the deduction (weight or value difference) will be distributed proportionally among the tagged Growers associated with that supply challan. (The detailed logic for the weighing and deduction formula will be provided by the client during the project planning phase.)
 - v. Processed Challan Label: For all processed challans where the Supplier Type is Aggregator, the system will display the Aggregator Name in place of the generic Supplier label in reports and summaries.
- e. Validations:
 - i. Gross $\geq$ Tare.
 - ii. Sum of Grower Breakup = Final Weight.

4. Reports

- a. Description:
 - i. Lists processed challans with filter and export.
- b. Flow:
 - i. Tap Processed Challans.
 - ii. Filter by Date range.
 - iii. Generate Daily Transactions Report (PDF or Excel).
 - iv. A dedicated Challan History Page is added to display complete challan details, including status (Received / Rejected) and showing records that were created by BLF on behalf of Growers or Aggregators.
 - v. All listing pages will display 10 records by default .
 - vi. Download PDF or Excel button exports the entire filtered data set covering all entries within the selected date range (if no filter applied , export all data).

5. Vehicle Management

- a. View/Add/Edit/Delete vehicles used for supply.
 - i. All edit or delete functions will occur till the challan processing from factory end. IF processed, there will be no such modification.

2.2 Web Application

2.2.1 Small Tea Grower (STG)

- a. No changes in web module for this user type.

2.2.2 Aggregator

- a. No changes in web module for this user type.

2.2.3 Factory User (BLF)

1. Add and Manage Farm Diary Data

- a. Description:
 - i. BLF users can now add or edit Farm Diary records for any Grower or Aggregator mapped to their factory network.
- b. Flow:
 - i. Login to the web portal → Navigate to Farm Diary.
 - 1. Select user type:
 - a. Small Tea Grower (STG)
 - b. Aggregator
 - ii. If Aggregator is selected, → dropdown lists all associated Growers.
 - iii. Select Grower → open Farm Diary → Add/Edit data under these sections:
 - 1. Map of Land
 - 2. Fertiliser Application
 - 3. Chemical Application
 - 4. Plucking Data
 - 5. Labour List
 - 6. Monthly Work Schedule
 - 7. Agreement & Registration (Digitally signed or upload signed copy)
 - iv. Save changes → data linked automatically to the selected Grower and Aggregator.
 - v. Manual Area/Coordinate Entry, Multiple Labour Selection, Default Current Date in forms, and Full PDF export of filtered records are available in this module.
 - vi. When the BLF adds data on behalf of a Grower or Aggregator, the record is tagged as “Added by BLF.”
- c. Conditions:
 - i. BLF can modify records only for Growers or Aggregators mapped to their factory.
 - ii. Internet connectivity required for digital map operations.
- d. Validations:
 - i. Mandatory Grower and Aggregator selection.
 - ii. Closed polygon for map boundaries.

2. Add and Manage Supply Data

- a. Description:
 - i. BLF users can now create and manage supply records and challans on behalf of both Growers and Aggregators.
 - ii. This allows factories to maintain complete supply records centrally and correct or supplement missing data from field entries.
- b. Flow:
 - i. Login → Navigate to the Supply Management section.
 - ii. Select user type:
 - 1. Select user type:
 - a. Small Tea Grower (STG)
 - b. Aggregator
 - iii. If STG selected → choose Grower → enter.
 - 1. Date of Supply
 - 2. Quantity (in kg)
 - 3. Vehicle details (optional fields: Vehicle Type, Number, Driver).
 - iv. If Aggregator selected → choose Aggregator → system lists all mapped Growers
 - 1. Enter Grower-wise quantities (in kg)
 - 2. Total quantity auto-calculated
 - v. Save → system generates a Challan ID and marks supply as “Pending.”
 - vi. Date of Supply auto-defaults to the current date (editable if needed).
 - vii. When a record is created on behalf of a Grower or Aggregator, a notification appears in their respective profiles showing the status (Pending / Processed / Closed) with a “Created by BLF” tag.
- c. Conditions:
 - i. BLF can only create or update data for Growers or Aggregators assigned to their factory.
- d. Validations:
 - i. Mandatory fields: Date, Supplier (Grower/Aggregator), Quantity.
 - ii. Quantity must be > 0.
 - iii. For Aggregator supplies, total = sum of Grower quantities.

3. Supply Processing and Verification

- a. Description:
 - i. Allows BLF to review and finalize pending challans submitted via mobile or created via the web portal.
- b. Flow:
 - i. Navigate to Pending Challans.
 - ii. Select challan → view detailed summary.
 - iii. Enter:

SHYAM

FUTURE TECH PVT. LTD.

ISO 9001:2015 | ISO 27001:2013

1. Gross Weight
 2. Tare Weight → Net weight auto-calculated
 3. Deduction % → Final Weight auto-calculated
 4. Optional: Fine Leaf %, Quality, Payment details
- iv. For Aggregator challans → access Grower Breakup section to distribute final weight among Growers.
 - v. Finalize → status updated to “Processed Challan.”
 - vi. At the final stage of submission, the BLF user must choose whether the supply has been Received or Rejected as part of the Supplier Exit acknowledgment.
 - vii. If the supplied quantity from an Aggregator is less than recorded, the deduction is distributed proportionally among the linked Growers associated with that challan (the detailed logic for weighment and deduction formula will be provided by client during project plan phase)
- c. Validations:
- i. $Gross \geq Tare$.
 - ii. Sum of Grower Breakup = Final Weight.

4. Reports and Data Viewing

- a. Description:
 - i. BLF can view and download reports for both Grower and Aggregator data, including farm and supply records.
- b. Flow:
 - i. Navigate to Reports → select report type:
 1. Farm Diary Report
 2. Supply Report
 3. Daily Transaction Report
 4. Challan History report: This report will list all challans with their final status (Received or Rejected and shows who created each record, including entries generated by the BLF on behalf of Growers or Aggregators
 - ii. Apply filters (Date Range, Supplier Type, Status).
 - iii. Export to PDF or Excel format.
- c. Conditions:
 - i. Data visibility restricted to Growers and Aggregators mapped to the factory.

2.2.4 Admin Panel (Web Application)

1. Reset Password Module

- a. Functionality

- i. Every user (STG / Aggregator / BLF / Admin) will have a “Reset Password” button beside their name.
- ii. Clicking this button:
 - 1. Resets password to a **predefined default password**
 - 2. Shows icon change → **Reset** → **Done**
 - 3. Once user changes the default password → Icon resets back.
- b. Conditions
 - i. Admin cannot set custom passwords.
 - ii. Admin is solely responsible for informing the user of the default password.
 - iii. Reset password action is **logged** at database level for audit.

2. Grower(STG) Registration Page Modification

- a. Description:
 - i. Add three new fields –
Land Document No., Lease Agreement No., Gaon Bura Certificate No. along with existing TBR No.(Tea Board Registration Number)
 - ii. At least one of the four fields must be provided for each grower.
 - iii. All four fields will be displayed in the frontend profile. (only the data filled fields will be displayed in frontend)
- b. Flow
 - i. Open Grower Registration form.
 - ii. Enter any of the four identification numbers.
 - iii. If no identifier exists for a grower, on next login system shows update message → redirect to update screen.
 - iv. Login access granted only after successful data update.
- c. Validations:
 - i. At least one of the four fields is mandatory → form will not submit if all blank.
 - ii. Values accept alphanumeric input (up to set length). – to be finalised by Trustea

3. Bulk New Data Upload - Grower Page Modification

This module allows administrators to upload multiple new grower records at once using an updated predefined template.

a. Description

- i. Enables uploading multiple new grower records using an updated bulk upload template.
- ii. The existing template will be enhanced to include all new grower identification fields (TBR No., Land Document No., Lease Agreement No., Gaon Bura Certificate No.).
- iii. Complete validation rules will be applied during upload, matching the manual registration process.

SHYAM

FUTURE TECH PVT. LTD.
ISO 9001:2015 | ISO 27001:2013

iv. If any uploaded grower has a name matching an existing grower, the system will display a warning pop-up showing all similar records with details such as:

1. Region Name
2. TBR Number
3. Or any other 4 key fields

v. Admin must manually confirm whether to insert the record.

b. Flow

- i. Admin navigates to Grower Bulk Upload screen.
- ii. Admin downloads the updated sample template.
- iii. Admin prepares the bulk data and uploads the file.
- iv. System performs validation on each record:
 1. Mandatory fields
 2. Data type/format checks
- v. If duplicate name(s) found → system shows a confirmation pop-up listing all potential duplicate entries.
- vi. Admin manually selects which records to accept or skip.
- vii. Valid and approved grower records are added to the system.

c. Validations

- i. All grower creation validations will apply exactly as in manual registration.
- ii. If all four identification fields are blank, the record will be rejected.
- iii. Duplicate names will be flagged and shown for review before upload.

4. Bulk Grower Data Update - New feature

a. Description

- i. Enables administrators to update existing grower records in bulk using a downloadable template.
- ii. All updates will be strictly mapped to the Unique Grower ID, ensuring accuracy.
- iii. The updated template will include all new fields, including grower identification fields.

b. Flow:

- i. Admin opens Bulk Update Grower Data section.
- ii. Admin downloads the system-generated sample update template.
- iii. Admin updates grower records offline and uploads the file.
- iv. System reads each row and identifies the grower using the Unique Grower ID.
- v. If Grower ID exists → record is updated with new values.
- vi. If any Grower ID is new or invalid →
 1. Those rows get highlighted
 2. Shown in a pop-up for review
 3. Marked as not included in the update
- vii. Only valid grower data is updated in the platform.

c. Validations

- i. Unique Grower ID is mandatory for every update row; if missing, the row is rejected.
- ii. System will not create new growers in the update process.
- iii. New/invalid Grower IDs will be flagged and displayed in a popup.

5. Data Archival & Retention

- a. All operational data (Farm Diary, Supply, Challan, Vehicle, Profile-linked entries, PDF reports metadata) older than 4 years will be archived automatically.
- b. Archival will be done through a scheduled background process, ensuring:
 - ii. Secure transfer of old data into a separate archival database/table
 - iii. Encryption-at-rest of archived data
 - iv. Indexed retrieval for audit purposes, i.e the archived data will be stored in a well-organised way so that it can be quickly and easily searched whenever needed for audits.)
 - v. Archived data will not appear in mobile/web listings or dashboards.
- c. Users will continue viewing only the last 4 years of data.
- d. Archived data can only be retrieved by authorised admin roles via an admin interface.
- e. The archive process log will be stored securely.
- f. Archival will run monthly or on a set schedule.

3 Before vs After Comparison

Aspect	Before	After
Login - App	Separate login per app	Unified login + OTP for BLF
Dashboards - App	Basic dashboards with limited info	Unified, role-based dashboards showing summary data and extra profile fields (Contact No., Tea Board No., TMCO No.)
Farm Diary - Map Entry	Manual/Digital maps (STG & Aggregator only)	Manual Area/Coordinate Entry option added for easier land mapping.
Farm Diary – Labour List	Could enter only one labour name at a time.	Multiple-labour selection enabled in the same record.
Farm Diary – Date and Schedule	User had to choose dates manually.	Date auto-filled with current date
Supply Management – Grower (STG)	Grower entered details manually.	Quantity auto-filled from latest Plucking Data with current date defaulted.

Supply Management – After Processing	Grower/Aggregator could still edit entries after BLF processing.	Records locked after processing (only view/download allowed).
BLF – Processed Challan Label	All challans showed “Supplier Name.”	When Supplier Type = Aggregator, label shows Aggregator Name.
Reports	Standard Farm and Supply reports only.	New “Challan History” report shows Received/Rejected status and creator details.
Data Retention/Archival	No data archival mechanism in the current system	Data older than 4 years is automatically archived securely.
Forgot Password	No such mechanism	OTP-based reset + Admin Reset for all users
Grower Identification	Only TBR No., optional	Four ID fields; at least one mandatory; forced update on login

4 Impact Assessment

1. Affected Modules

- Mobile App:** Login, Dashboard, Farm Diary, Supply Management, Supply Processing, Reports, Vehicle, Collection from Grower.
- Web Admin:**
 - Admin User: User Management (Aggregator, BLF, STG)
 - BLF User: Farm Diary, Supply Management, Supply Processing, Reports, Vehicle.

2. Expected Downtime

- Minimal; can be deployed during non-peak hours.

3. Data Migration

- Existing data will remain unchanged. All new data created after implementing this scope will be stored as per the updated structure.

5 Effort & Timeline Estimation:

5.1 Module-wise effort breakdown

Sl. No	Module /Service	Effort in Hour (Frontend)	Effort in Hours (Backend)
01	Login - App	8	6

02	Dashboard - App	12	6
03	Farm Diary- App	28	8
04	Supply Management - App	24	8
05	Supply Processing - App	20	8
06	Reports - App	20	8
07	Vehicle Management - App	8	4
08	BLF – Web Admin	24	96
09	Data Archival Mechanism – Web Admin	0	40
10	Modification in Grower (STG) Registration & Forgot Password Functionality – Web Admin	1	8
Total Development Effort Hours		145	192

5.2 Consolidated Effort Breakdown

Sl. No	Service	Effort in Hour
01	BA Engagement	40
02	UI/UX Design	40
03	Frontend Development	145
04	Backend Development	192
05	QA	48
Total Effort Hours		465

5.3 Cost Summary

Sl. No	Service	Cost (INR)
01	Tracetea Project Revamp – Mobile App and Web	3,84,000/-
	Taxable Amount	3,84,000/-
	GST 18%	69,120/-
	Total Payable	4,53,120/-

5.4 Delivery Timeline

Timeline: 3.5-4 months

5.5 Payment Milestones:

Milestone	Service to be Provided	Payments linked to milestones (INR)
01	Advance	2,26,560/-
02	On Delivery	2,26,560/-
